Marine conservation refers to the study of conserving physical and biological marine resources and ecosystem functions. It is the protection and preservation of ecosystems in oceans and seas through planned management in order to prevent the exploitation of these resources. Marine conservation is driven by the manifested negative effects being seen in our environment such as species loss ...

Introduction. This article discusses the emergence and significance of the concept of biodiversity and history of conservation biology. It intends to describe how research on taxonomy, ecology, evolution, behavior and distribution of species, allied to concerns about habitat destruction and species extinction, led to the emergence of conservation biology.
