Performance testing tools are basically for system level testing, to see whether or not the system will stand up to a high volume of usage. A load testing is to check that the system can handle its expected number of transactions. A volume testing is basically to check that the system can handle a large amount of data, e.g. many fields in a record, many records in a file, etc.

A race condition or race hazard is the behavior of an electronics, software, or other system where the output is dependent on the sequence or timing of other uncontrollable events. It becomes a bug when events do not happen in the order the programmer intended.. The term race condition was already in use by 1954, for example in David A. Huffman's doctoral thesis "The synthesis of sequential ...
